

How has COVID-19 impacted commercial fleets?

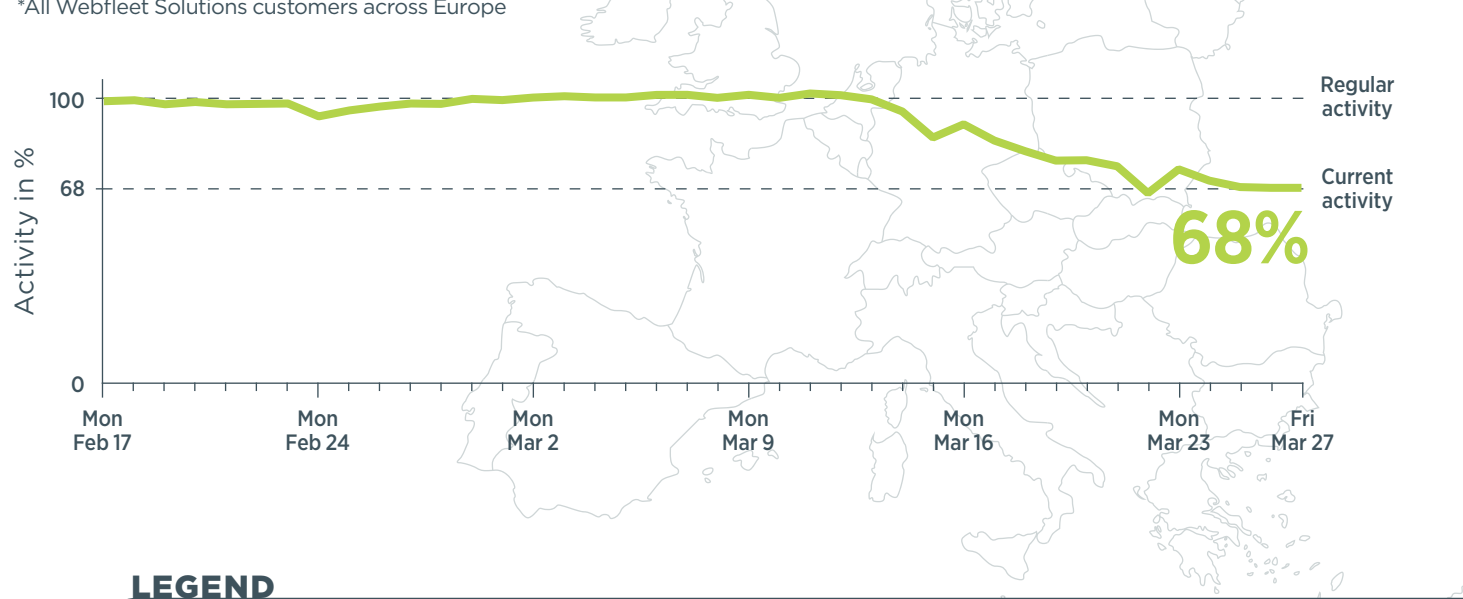

COVID-19 has already had a major impact on lives and businesses across Europe. But how has it affected European commercial fleets?

Webfleet Solutions is Europe's leading fleet management provider and services over 50,000 customers with almost 1,000,000 commercial vehicles. These include trucks, busses, vans and normal passenger vehicles that support business activities like transport, distribution, home deliveries, maintenance services, security services, emergency services and more.

We've analysed, aggregated and anonymised data from the vehicle movements of WEBFLEET customers over a six-week period in seven European countries and the continent as a whole, to provide insights into the impact on the overall mobility of businesses.

LEGEND

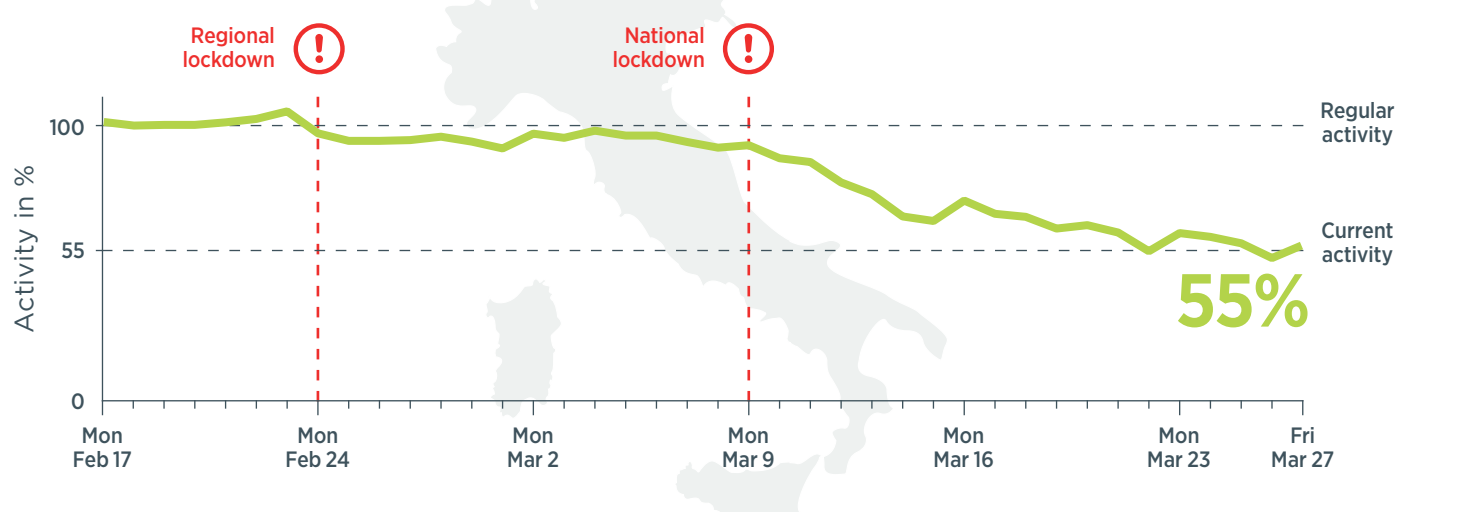

Activity

The graphs measure changes in commercial fleet activity (based on trips being taken by Webfleet Solutions customers) against the level of commercial fleet activity in a usual calendar week.

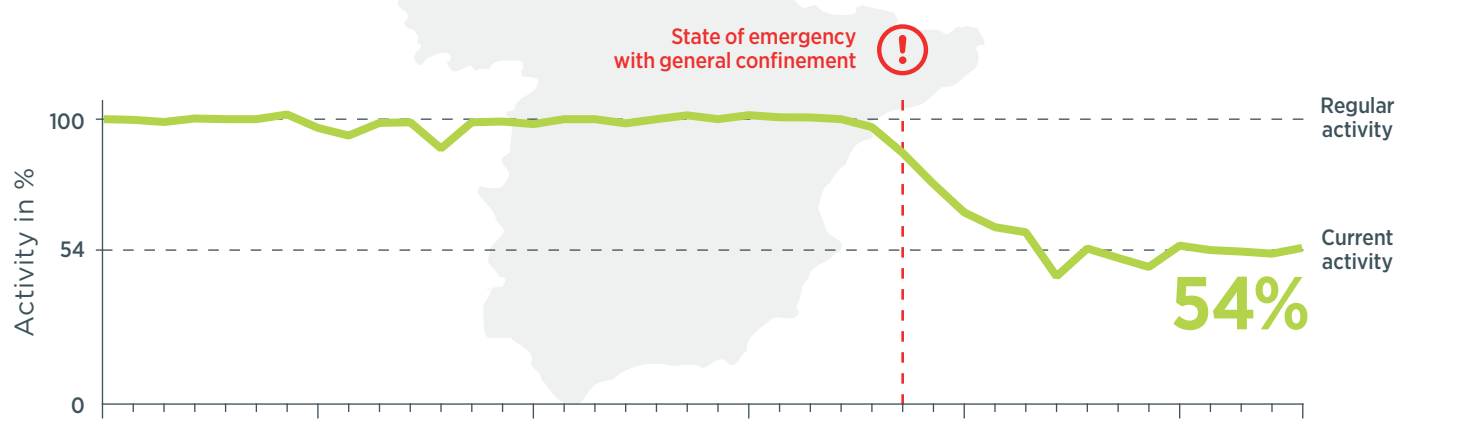

Starting date for key government measures taken on movement and social gatherings. For each country, we have briefly indicated the nature of these measures. Please note, however, that this does not cover all measures taken in each country or all of the region/city specific measures taken in some countries.
